When I first heard about this, I was furious! The one cancer test that could save your life...if only you knew about it

by Michele Cagan

Why are so many people dying from cancer? The sad truth: It's because the mainstream cancer industry doesn't have a way to find it early enough.

And even though early detection provides the best chance of cancer survival, the only test offering truly early detection is all but being ignored.

That's right. An extremely early detection test already exists, a test that can even accurately identify the type of cancer.

Yet when the National Institutes of Health (NIH) had the chance to support this test, they passed.

In fact, their single sentence response went something like this: "There is no such thing as a universal cancer marker, therefore this must be flawed."

The cancer test that puts all others to shame

It's not flawed. It is a real, highly successful cancer test. Not only can it detect cancer years before clinical symptoms show up, it can even tell you what kind of cancer it is.

That's right. A single blood test can accurately identify more than 20 distinct cancers, even 10 years before any signs or symptoms. And the way this test works—which we'll talk about in just a moment—virtually eliminates the risk of false positives, a terribly common occurrence with mainstream tests.

I know it sounds too good to be true—a single test that can identify nearly every kind of cancer a decade before symptoms show up. But this is the real deal.

And it could very well save your life.

How fast will cancer kill you?

Hint: That's the WRONG question

You probably know someone who's been diagnosed with cancer, and chances are the prognosis was pretty short: at most a few years, more likely a few months.

That's because by the time symptoms show up, cancer is pretty advanced. And since mainstream medicine can't really detect cancer until it's big enough to see, the disease is usually pretty far along.

So the time from the oncologist's diagnosis to complications, chemotherapy, and death is never really very long.

But the time from original onset—the very first cancer cells—to the time when mainstream medicine can correctly diagnose the cancer, the time when clinical symptoms appear, well that can take a very, very long time—up to twenty years.

And once it spreads (metastasizes)—a LATE stage in the process, then it moves much faster.

By that time, the prognosis will be bleak, something every oncologist knows.

The earlier cancer is detected, the better chances of patient survival. In fact, early

Our Mission

The Health Sciences Institute is dedicated to uncovering and researching the most urgent advances in modern underground medicine.

Whether they come from a laboratory in Malaysia, a clinic in South America, or a university in Germany, our goal is to bring the treatments that work directly to the people who need them. We alert our members to exciting breakthroughs in medicine, show them exactly where to go to learn more, and help them understand how they and their families can benefit from these powerful discoveries.

This cancer test can save your life

(continued from page 1)

detection gives you the best chance—maybe the only chance—of victory.

This single early detection test offers your best chance of survival

The cancer test I'm talking about can change everything.

- Early cancer detection, maybe decades before mainstream medicine would see it
- Accurate cancer identification, so you know where the cancer started and how best to treat it
- Accurate diagnosis, so you don't have to worry about false positives
- Easy to do, because a single simple blood test does it all

This test, the test that could help millions of people defeat cancer even before it takes a stronghold, comes from a brilliant pair of scientists, Drs. James and Dorothy Morr , a husband and wife who've devoted their lives to defeating cancer.

Weed killer inspires a young scientist to defeat cancer

Back when Dr. Morr  was a teenager, he got his first job, spraying weeds at the University of Missouri with a weed killer called 2,4-D.

He was fascinated by the way the plants grew out of control, then died after he sprayed them. So, with his curious scientific nature taking hold, he tried to learn more. He came across an article about 2,4-D—and at the end it posed a chal-

lenge that that young James Morr  took to heart: If it was possible to learn how 2,4-D killed plants, we could cure cancer.

He's been working on the problem ever since...and now it's solved.

You see, early in his career, Dr. Morr  first discovered compounds called NOX proteins, which had been the target for the 2,4-D weed killer. He realized that these proteins were nicely regulated in normal cells...but they ran wild in cancer cells.

After many years of grueling research, he was finally able to isolate the elusive tNOX, now known as ENOX2, a form of the protein that only exists on cancer cells.

One little protein holds the key to accurately detecting cancer as soon as it starts

As you might expect, the science here is pretty complicated. But it all boils down to this:

Through their research, the Morr s realized they could detect the presence of cancer using the ENOX2 protein as a marker, because it's only produced by malignant cancer cells. Basically, if you've got ENOX2 in your blood, you have cancer cells in your body.

And then they learned something even more amazing.

Each cancer has its own distinct ENOX2. The protein has a different molecular weight depending on where the cancer originated.¹ So the test the Morr s developed not only shows whether you have cancer, it can tell you

(continued on page 6)

How much does it cost to screen for cancer (on average)?	
Mammogram	\$125
Low-dose CT scan (for lung cancer)	\$200-\$400
Standard colonoscopy	more than \$2,000
PSA test	\$100
Brain CT scan	\$1,100

Revolutionary formula kills cancer cells with precision targeting

by Michele Cagan

It's ingenious: Pinpointing what was once a great strength and turning it into a deadly weakness.

But that is exactly what a group of dedicated cancer researchers has done.

They discovered exactly how to turn the tables on cancer cells. What once made them grow and thrive is now the prime target for their systematic elimination.

Cancer cells simply cannot survive under this kind of focused attack.

Which means that your chances of survival just grew enormously.

Discovering their weakness leads to cancer-killing formula

Earlier in this *Members Alert*, you learned about a special protein that could help detect cancer years before we ever thought possible. But that special protein, called ENOX2, doesn't just give us a way to find cancer...

It gives us a direct path to target and kill cancer cells. So far, it's been shown to work on many different types of cancer cells. And considering that all cancer cells seem to rely on this protein, it may just be able to kill them all.

And unlike conventional treatments, like radiation and chemotherapy, that demolish healthy cells, and leave you feeling too sick to live, this natural cancer killing formula will make your immune system even stronger.

Target acquired, cancer defeated

The target of this formula, called Syntra T6 is the protein called ENOX2, a protein that's only produced by malignant cancer cells. This protein lives on the cells' surface, and allows the cancer to thrive, survive, and replicate.

When the power of Syntra T6 shuts down its ENOX2 target, the cancer cells are prevented from growing.¹ A

cancer cell that can't grow also can't divide. And cancer cells that don't meet the equivalent of a minimum size requirement get programmed to die, a process called apoptosis.

Simply put, this could be a true cancer cure—especially when it's combined with early detection.

Powerful blend is 100 times more lethal to cancer cells

Syntra T6 contains only two ingredients...but that's all you need to effectively wipe out cancer cells.

The primary ingredient is a proprietary decaffeinated green tea extract. And unlike other extracts, this one keeps the crucial cancer-fighting compounds in its natural ratio. This extract contains 80% green tea polyphenols enriched in catechins, including 50% EGCG. And as Dr. Ray Cooper, one the researchers involved in the development of Syntra T6, told me, "The mix of polyphenols is very important. Preserving the natural ratios of all the catechins—not just EGCG—is critical."

The second ingredient is capsicum powder from guajillo peppers. Capsicum (not to be confused with capsaicin, the natural chemical that makes hot peppers burn) contains very powerful anti-cancer compounds called vanilloids.

The two ingredients are combined in a specific, proven ratio of 25 parts green tea extract to 1 part capsicum powder based on the laboratory findings of the cancer research team. And when they're combined this way, they have a cancer cell kill rate 10 times greater than the green tea alone, and 100 times greater than EGCG alone.²

Preliminary trials successful

So far, there aren't any major clinical trials using this formula in cancer patients. But that doesn't mean it's untested.

Preliminary open-label intervention trials have shown success. According to this research, 36% of patients with various active cancers (prostate, lung, breast, kidney, and ovarian) lived significantly longer using this formula.³ Plus, 32% of the cancer patients saw statistically significant improvements.

And while almost all of those cancer patients had suffered through extensive radiation and chemotherapy, the formula still offered substantial benefit.

Dr. Cooper also told me about the success of an earlier slightly modified version of the formula in head and neck cancer patients. Leading cancer surgeons at Makati Hospital in Manila gave the product to cancer patients, and saw remarkable improvements in their prognosis and recovery.

And while there are no large, double blind placebo controlled clinical studies...yet...the anecdotal evidence is piling up. "Most people benefit dramatically from taking this product," Dr. Cooper told me. "But we need some clinical trials to really demonstrate that."

But as an early intervention, this formula is at its most effective.

94% of cancers completely cleared in 6 months

This may be the most exciting data of all—though it is very preliminary.

In an early detection/early intervention trial, this formula helped clear 94% of cancers in just 6 months.

One hundred participants were tested with an early cancer detection test (called ONCOblot[®], also featured in this *Members Alert*). And while most of them tested negative for cancer, 39 were found positive for early stage cancer:

- 12 with non-small cell lung cancer
- 10 with breast cancer

(continued on page 6)

Lose more than a pound a week just by drinking tea

by Michele Cagan

“I lost 28 pounds since I started drinking this tea.”

Donna Weston has been struggling with her weight for quite some time. “I’m at the age where it’s easy to gain weight, but hard to lose it,” she told me. Maybe you can relate.

And while she was trying some supplements and watching what she ate, it still didn’t seem to be working.

Then about four months ago, she decided to try a weight loss tea she’d heard about. And that made all the difference.

Adding the tea into her diet helped her start losing weight more easily—and it seems to really work well for losing inches.

“It really works for me. I’m on my third box, and I plan to keep using it.”

Drink pounds and inches away with this weight loss tea

Donna isn’t the only one who’s seen great results. Dozens of people struggling with weight issues have found this tea makes it so much easier to drop pounds.

But the family company (Galilee Tisanes) that makes GreenSlim® weight loss tea, wanted more than positive word-of-mouth reports. So they completed a small trial to show just what this tea could do.

They recruited 26 overweight and obese subjects, all weighing at least 154 pounds and having a body mass index (BMI) of at least 27 (a BMI of 25 indicates overweight). The subjects were told to keep up with their usual lifestyle and eating habits, but to add in three cups of GreenSlim tea every day for 8 weeks.

On average, the subjects lost nearly 6 pounds by the end of week 5...and another 6.4 pounds by the end of the trial period. That’s more than 12

pounds in just 8 weeks, and all they did was drink a few cups of tea.

What’s really interesting is that weight loss doesn’t seem to be the only benefit of GreenSlim tea. The subjects each completed a Quality of Life Survey at the end of the trial, comparing how they felt then to how they felt at the onset. Overall, the group reported improvements in

- Energy
- Headaches
- Fatigue
- Digestion
- Desire
- Sleep

That’s a lot of benefit packed into a cup of tea, but when I saw the formula, it all made sense.

It starts with green tea

HSI members know just how much we think of green tea around here. And in addition to its powerful antioxidant and anticancer properties, green tea can also do a lot in the fight to lose weight.

For thousands of years, green tea has been used to increase vitality and good health.

And there’s no lack of science to back that up. Here’s just a small selection of studies.

A 2005 study found that the catechins in green tea stimulate calorie burning.¹ In that three-month trial, the researchers learned that subjects drinking tea fortified with green tea extract every day lost more body fat than the subjects who drank plain oolong tea.

Another small study included 30 overweight adults, half of which were

given a green tea drink while the other half acted as the control group.² The green tea group saw a reduction in both weight and fat mass by the end of the six-week trial period.

In 2009, researchers studied the impact of a catechin-rich green tea beverage on more than 100 overweight and obese subjects in a controlled twelve-week trial.³ The people in the catechin-rich green tea group lost more weight than the other group, especially when it came to trimming abdominal fat. On top of that, their triglyceride levels dropped by an average 11 points.

Four more herbal ingredients support easy weight loss

Green tea on its own can help you lose weight...but it goes faster and easier when you add in these supportive herbal ingredients.

Stinging nettle (*urtica dioica*) is traditionally used as a diuretic and to stimulate digestion. Preliminary animal studies indicate that it may also help lower blood sugar and blood pressure.

Chamomile (*Matricaria recutita*) helps regulate blood sugar levels and soothe digestive woes. It’s also well known for its anxiety and insomnia reducing properties.

Lemon grass (*cymbopogon citrates*) is commonly used to help detoxify the liver and relieve indigestion, along with stimulating healthy digestion.

Stevia (*stevia rebaudiana*) is best known as a natural no-calorie sweetener...and it does add a pleasant sweetness to the GreenSlim tea. Stevia also works to help balance blood sugar and reduce sugar cravings.

(continued on page 8)

No scratch tests, no shots, no side effects— just complete permanent seasonal allergy relief

by Michele Cagan

“I can’t stand another pollen season like last year. I couldn’t be outside for five seconds!”

My friend Elisa suffers miserably when pollen flies—and the 2012 pollen season was the worst she can remember.

So when I came across this allergy-curing formula, I knew I had to tell her about it.

Because, I hate to break it to you, but you (and Elisa) may look back fondly on 2012 as the last easy pollen season ever.

Pollen counts on track to double by 2040... and it gets worse

Last year brought us one of the worst allergy seasons ever. And it was just the start. Pollen counts are rising rapidly, and are expected to at least double by 2040, according to the latest research. And that means a lot of extra suffering for people with seasonal allergies.

There’s plenty of finger pointing: global warming, rising CO2 levels, and pollution are all being blamed. But whichever is causing pollen levels to increase—and it’s probably all of the above—is working very fast.

And that would be bad enough if it were the only problem we’re facing... but it’s not.

Scientists also expect pollen season to be longer than ever.¹ Research shows that the ragweed pollen season has already gotten 13 to 27 days longer in the northern U.S. and Canada. A lon-

ger pollen season means more exposure to allergens...and a big impact on your allergy miseries.

Double pollen?! Longer pollen season?! It’s a recipe for misery—but it doesn’t have to be.

Rising pollen counts delight Big Pharma execs

I’m just guessing here, but why wouldn’t that make them throw pollen pill parties? Allergies are very big business, after all.

In fact, according to an article in *Forbes*, the market for allergy medications is expected to top \$14.7 billion by 2015 in the U.S. alone.²

Never mind that most of these drugs come with significant side effects, cost a lot of money, and need to be taken constantly for the long haul just to keep some symptoms at bay.

On top of that, these drugs treat everyone’s allergies exactly the same, no matter what’s causing them. And that really doesn’t make any sense at all.

Which is why you need the cure that counters YOUR allergens.

Fight the right pollen to escape allergy misery

The allergy medicine industry treats everyone’s seasonal allergies exactly the same, but that couldn’t be a bigger mistake. Someone living in Hawaii won’t be facing the exact same allergens as someone living in Michigan...so why treat their allergies exactly the same way?

And that’s why King Bio came up

with the regional approach to seasonal allergies, the only approach that actually makes sense. What’s more, it really works, wherever you live.

There are nine distinct formulas, each one covering a specific region in the United States. So whatever pollen, weeds, grasses, and molds are hitting you where you live, there’s a specific solution that addresses them head on. The regions are based on a U.S. map of allergens, and here’s how they fan out

1. Hawaiian Islands
2. Great Lakes (Minnesota, Wisconsin, Michigan, Iowa, Illinois, Indiana, Ohio, and Missouri)
3. Desert U.S. (Arizona, New Mexico, and the desert areas of Utah, California, Nevada)
4. Rocky Mountains (Colorado, Idaho, Montana, Utah, Wyoming, Nevada, Oregon, Washington, Arizona, New Mexico)
5. Northeastern U.S. (Maine, New Hampshire, Vermont, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, Pennsylvania, Delaware, Maryland, Washington D.C.)
6. Pacific U.S. (Washington, Oregon, California, Nevada)
7. Plains (North Dakota, South Dakota, Nebraska, Kansas)
8. Southern U.S. (Arkansas, Louisiana, Mississippi, Alabama, Georgia, Florida, Tennessee, Kentucky, West Virginia, Virginia, North Carolina, South Carolina, Maryland, Delaware, Washington D.C.)
9. Southwestern U.S. (Oklahoma, Texas)

Would you rather get allergy shots?

One of the only successful mainstream medicine practices follows the homeopathic approach. Allergy shots use the law of similar, just like homeopathy, to help desensitize you to allergens. The big difference is that anxiety-producing allergy shots can take years to work...not to mention the expense and pain.

(continued on page 7)

Cancer test

(continued from page 2)

exactly where it started.

That's right, the test can accurately diagnose more than 20 different cancers, years before clinical signs show up.

It all started with lung cancer...

Back in 2006, the Morrés and their team screened blood from 421 volunteers. The group included

- 104 lung cancer patients
- 175 smokers not diagnosed with lung cancer
- 117 randomly selected patients
- 25 healthy people

Their cancer detection test showed positive for 103 of the 104 lung cancer patients. Along with that, 12% of the smokers (over age 40) showed positive, though none were yet diagnosed—that ratio matches the normal incidence of lung cancer in smokers. And none of the healthy volunteers came back positive.

They saw similarly spectacular results for other types of cancers, too. Using blood samples from the Early Detection Research Network of the National Cancer Institute, the team was able to detect lung cancer, breast cancer, and ovarian cancer.

And the ongoing research has allowed them to identify more than 20 different

cancers. Their test, called ONCOblot[®] can now detect all of these specific cancers:

Bladder	Kidney
Thyroid	Endometrial
Colon	Esophageal
Liver	Bladder
Glioma	Mesothelioma
Ovarian	Myeloma
Large cell lung	Small cell lung
Breast	Prostate
Multiple myeloma	Malignant melanoma
Lymphoma	Leukemia
Pancreatic	Cervical

Don't wait to get tested... especially if you're at risk

Chances are your doctor—even your oncologist—has never heard of ONCOblot[®].

But if you're at risk for developing cancer, this test could be a lifesaver.

There are three ways to get the test, all of which require a doctor:

1. Have your doctor order a test kit
2. Contact one of the three doctors already working with the test, and

have them order the test for you

- Dr. Leigh Erin Connealy, MD, (949) 680-1880, www.centerfornewmedicine.com
 - Dr. Claudia Hanau, ND, (765) 464-1545, www.hanauholistic.com
 - Dr. Kimberly Wilson, NMD, (972) 608-0100, innovationswellness.com
3. Send a confidential email to the ONCOblot[®] online physician through the website at www.oncoblots.com and she will order the test kit for you

If you use the second or third option, you will get a test kit in the mail, and take it to a lab near you to get blood drawn. The lab will complete the test kit for you and submit it for processing.

Now, this test is pricey. It costs \$850 for the test alone, not including any doctor or lab fees. A lot of money, to be sure, but that's less than getting tested separately for 20 different kinds of cancer—not to mention learning about the cancer before it's too late to do anything about it.

You can find more information about ordering ONCOblot[®] in your Member Source Directory on page 8. **HSI**

Kill cancer with targeted precision

(continued from page 3)

- 6 with lymphoma/leukemia (the marker is identical, as both come from white blood cells)
- 1 with ovarian cancer
- 1 with melanoma
- 1 with prostate cancer
- 1 with colon cancer

There were also seven subjects showing positive for ENOX2 proteins (which indicates cancer), but these specific proteins were not yet identified in the database.

And of the subjects who completed the six-month intervention with this formula, 94% tested negative for cancer in their follow-up tests.

You have to take Syntra T6 EXACTLY as directed to kill every cancer cell

Syntra T6 can wipe out cancer cells before they're even detectable by mainstream medical tests. And killing cancer at this very early stage is really the only way to go.

So it's critical that you follow the manufacturer's recommendations to the letter.

In order to make sure you are killing off every last cancer cell, this formula needs to be taken every four hours, even overnight.

Taking it on a strict schedule is crucial for success, because the ENOX2 protein must be inhibited continuously or Syntra T6's curative effects can be reversed.

That means the cancer cells will grow and divide, getting stronger as they do—and some cancer cells may become resistant to Syntra T6 if they're allowed any break at all. (This works kind of like antibiotics: You have to take them consistently, even after you feel better, to make sure all the bacteria are killed off.)

You can find ordering information for Syntra T6 in your Member Source Directory on page 8. **HSI**

Visit us online at www.HSOnline.com

Complete allergy relief

(continued from page 5)

Each regional formula contains a focused blend of at least 16 homeopathic ingredients, all carefully selected to cover the most potent allergens in the area.

If you live on a regional borderline (you'll see some states are covered in two different formulas), you might need to use more than one formula. Because wherever the wind blows, the allergens go...and miserable symptoms are sure to follow.

Using what ails you to make you feel better...fast

Along with region-specific ingredients, each formula includes a specific blend of homeopathic remedies for symptom relief.

Working from a base of three long-proven remedies, each regional blend also contains the exact homeopathic ingredients to address pollen-specific symptoms. That three-ingredient base contains homeopathic

- *Histaminum*
- *Adrenalinum*
- *Allium cepa*

As many HSI members know, homeopathy works by the law of similar: an extremely tiny dose of what's hurting you gives your body the tools to self-heal. And that's why one of the key ingredients in these formulas is *histaminum*.

Histaminum, as you might expect, comes from histamine itself, but a highly diluted version. In practice, this homeopathic remedy is well-known for relieving stuffed nose, itchy or painfully dry nose, dry throat, feelings of tightness in your chest or throat, and a "tickling" cough.

Adrenalinum comes from epinephrine, another compound that people suffering from allergies may be familiar with. Like the *histaminum*, this is an extremely diluted version. It's typically used to help allergy sufferers with troubled breathing, asthma, hay fever, and lung congestion.

Allium cepa comes from onions—and if you think about what happens when

you cut up onions, that makes a lot of sense. This often used homeopathic allergy remedy helps with red, burning, itchy watery eyes, as well as runny nose and sneezing.

The average pollen count came in at 8,455 back in 2000. By 2040, scientists expect it to skyrocket to 21,735.

These three remedies alone pack a lot of symptom relief. And when they're combined with region-specific remedies and allergens—yes, the formulas do contain highly diluted versions of the regional allergens—the results are nothing short of miraculous.

Best of all, these formulas work quickly, without the nasty side effects of pharmaceuticals.

Antihistamines increase your risk of brain tumors by 86%

They're bad on so many levels, but because so many of them are sold over-the-counter, people just assume they're safe. But antihistamines can do a lot more damage than just making you drowsy.

In the worst case scenario, taking antihistamines can raise your risk of getting brain tumors.³ Researchers pooled the results from two studies, which included more than 1,400 patients—610 with brain tumors, and 831 without. The scientists discovered that regular use of anti-

Fighting the allergen gang

Allergies can add up, joining together like a gang of bullies. So if you've got seasonal allergies plus other allergies (like pet dander and common foods), they work together and increase your symptoms. So it may take more than one remedy to stop them.

histamines increased the risk of developing low-grade glioma brain tumors by 86%.

And while that may be the worst, it's certainly not the only potential side effect you'll be risking...

- decreased libido
- increased appetite
- cognitive impairment
- depression
- dry mouth
- dizziness

Why risk all that when you can get rid of your allergies quickly, safely, and maybe even permanently?

KingBio Regional Allergies formulas are the best first choice for defeating seasonal allergies

Before you let an allergist turn you into a pincushion, try the KingBio Regional Allergies formula that combats the pollen in your hometown.

According to Dr. Frank King of KingBio, you can use these formulas in three different ways to greatly broaden their therapeutic benefits.

1. Take the sprays orally, at least three times a day
2. Spray it topically on itchy areas (if you're eyes are itchy, close them before spraying around your eyelid)
3. Spray it in front of your face and breathe it in through your nasal passages to deepen its healing action

Most people feel better right away, but in some complicated cases (like people with multiple allergies), it can take as long as three weeks to make a difference—so give it time.

You can find ordering information for KingBio Regional Allergies formulas in your Member Source Directory on page 8. **HSI**

Lose weight by drinking tea

(continued from page 4)

“It jumpstarted my weight loss after the holiday season”

HSI member George Richards tried GreenSlim tea when he wanted to get his weight under control.

And since he'd had success with other teas from Galilee Tisanes (including their blood sugar balancing tea Glucole, which he learned about in his June 2012 *Members Alert*), he had high expectations.

“I drink two cups a day, one with

dinner and one before bed. When I take the tea, I seem to eat a little less,” George said. “And I don't seem to gain as much weight when I overindulge...and I have a very sweet tooth, I like dessert.”

A lifelong athlete, George can tell when his stamina is off. And since he isn't as active as he used to be, it's much harder to keep the weight off. But GreenSlim tea helps him keep his weight steady despite less activity.

And even after a holiday season full of overindulgence, he was able to get

back to normal pretty quickly, thanks to the tea.

Drink three cups a day, and watch pounds and inches melt away

If your weight loss needs a jumpstart, try adding GreenSlim tea to your routine. The manufacturer recommends drinking three cups per day.

You can find ordering information for GreenSlim tea in your Member Source Directory below. **HSI**
